Liverpool, United Kingdom | +44 7350 214100 | martinkamau72@gmail.com

PROFESSIONAL SUMMARY

Data Engineer with 2+ years of experience designing analytics-ready data models and ETL/ELT pipelines that turn messy operational data into reliable, decision-ready datasets. Currently building dbt models and Snowflake-based warehousing solutions, with hands-on work in dimensional modeling, medallion-architecture layering, staging-to-mart transformations, and data quality testing. Proficient in SQL, Python, Power BI, Fivetran, and Airflow, with a track record of improving data accuracy, cutting reporting time, and enabling cross-functional teams to self-serve insights. Comfortable bridging technical pipeline work with clear communication to non-technical stakeholders.

SKILLS

- Analytics Engineering: dbt (staging/mart models, testing), dimensional modeling, star/snowflake schema design
- Data Warehousing: Snowflake, PostgreSQL, MySQL, MongoDB
- Programming: Python (Pandas, NumPy), SQL (CTEs, window functions, joins, query optimization)
- Pipelines & Orchestration: ETL/ELT design, Apache Airflow, Fivetran, Docker
- Visualization & Reporting: Power BI, Excel, Power Query
- Data Quality & Governance: automated data quality testing, data flow mapping, metadata management
- Collaboration: Git, Notion, cross-functional stakeholder communication
- Other: REST API integration, A/B testing, statistical analysis

WORK EXPERIENCE

Data Engineer

Jun 2026 – Present

Harvard Business Publishing – Remote

- Build and maintain dbt models across staging and mart layers (e.g. customer and support summary marts) on Snowflake, translating raw source data into analytics-ready datasets.
- Design dimensional data models following star/snowflake schema principles to support scalable, reusable reporting across teams.
- Ensured adherence to medallion architecture (bronze/silver/gold layering) across staging-to-mart transformations to maintain clear separation between raw, cleaned, and business-ready data.
- Diagnose and resolve pipeline and data quality issues, including source freshness failures and connector configuration errors, to keep analytical outputs reliable.
- Migrate legacy workflows from Alteryx and Domo into SQL/dbt-based pipelines, consolidating logic into a single, maintainable transformation layer.
- Configure Snowflake access control and secure key-pair authentication for data ingestion tools, supporting governed, production-grade data integration.
- Manage Fivetran connectors for automated data ingestion into Snowflake, resolving configuration issues to ensure reliable source-to-warehouse syncing.
- Write and maintain automated data quality tests within dbt to catch data integrity issues before they reach reporting layers.

System & Data Analyst

Dec 2023 – May 2026

CHAJI Services Limited – Nairobi

- Designed SQL-based ETL pipelines to process real-time EV charging data, improving data accuracy by 30%.
- Extracted, cleaned, and transformed high-volume transactional data using SQL and Python to support business decision-making.
- Built Power BI dashboards and analytics-ready datasets to track EVSE performance, green job creation, and CO₂ reductions, enabling data-driven strategic planning.
- Integrated data from IoT devices, APIs, and field surveys into unified datasets, applying data flow mapping and metadata management practices.
- Led data quality assessment initiatives, achieving 95%+ accuracy in operational reports.

- Conducted A/B field tests to optimize product rollout, reducing rider-related support issues by 35%.
- Trained field teams and new hires on data collection tools (KoboToolbox, Google Sheets), improving reporting compliance by 25%.

Business Analyst

Mar 2023 – Oct 2023

Payopesa – Nairobi

- Analyzed transaction and customer engagement data using SQL & Excel, identifying trends that informed product adjustments.
- Produced weekly performance reports for management, improving decision-making efficiency by 20%.
- Developed customer segmentation models, increasing targeted marketing efficiency by 15%.
- Communicated key analytical insights clearly to non-technical stakeholders, securing buy-in on strategy changes.

EDUCATION

Master of Science, Data Science

Sep 2026 – Present

Liverpool John Moores University – Liverpool, UK

Bachelor of Science, Mechatronics Engineering

Sep 2017 – June 2023

Jomo Kenyatta University of Agriculture and Technology – Nairobi, Kenya

PROJECTS

Social Media Data ETL Pipeline — Python, Docker, MongoDB, MySQL, PostgreSQL, Apache Airflow

- Built a complete ETL pipeline extracting social media data from NoSQL (MongoDB) and SQL (MySQL) sources, transforming it with Pandas/NumPy, and loading it into PostgreSQL for centralized analytics.
- Automated the pipeline with Apache Airflow inside a Dockerized environment for reproducible, scalable deployment.

EVSE Data Analytics — Python, Docker, SQL, Apache Airflow

- Analyzed IoT data from EV charging stations to identify usage patterns and optimize charging schedules, improving uptime by 15% and energy delivery efficiency by 20%.

CERTIFICATIONS

- Associate Data Engineer, DataCamp
- Career Essentials in Data Analysis, Microsoft & LinkedIn
